TOXICOLOGY

# Volume contents

## Volume 103 (1995)

Effect of methylmercury ($CH_3HgCl$) injury on nitric oxide synthase (NOS) activity in cultured human umbilical vascular endothelial cells (**Methylmercury inhibits the production of NO in the vascular cells**)
T. Kishimoto, T. Oguri, M. Tada (Izumo, Japan) ..... 1–7

Pulmonary toxicity of nickel subsulfide in F344/N rats exposed for 1–22 days (**Nickel subsulfide at airborne concentrations near the current TLV produces detrimental changes after only a few days exposure**)
J.M. Benson, Y.-S. Cheng, A.F. Eidson, F.F. Hahn, R.F. Henderson, J.A. Pickrell (Albuquerque, NM) ..... 9–22

Pretreatment with *p*-aminohippurate inhibits the renal uptake and accumulation of injected inorganic mercury in the rat (**The effect is time- and dose-dependent**)
R.K. Zalups, D.W. Barfuss (Macon, Atlanta, GA) ..... 23–35

*N*-Acetyl-β-D-glucosaminidase (NAG) isoenzymes in primary cultures of rabbit kidney proximal tubule cells: a cellular model for studies on nephrotoxicity? (**The title question is answered in a largely negative sense**)
D. Robic, M. Bens, F. Loko, A. Vandewalle, R. Bourbouze (Paris, France) ..... 37–44

2,3,7,8-Tetrachlorodibenzo-*p*-dioxin blocks the physiological regulation of hepatic phosphoenolpyruvate carboxykinase activity in primary rat hepatocytes (**TCDD requires time to block PEPCK induction by dexamethasone**)
B.U. Stahl (Kansas, KS; Oberschleißheim, Germany) ..... 45–52

Lead affects steroidogenesis in rat Leydig cells in vivo and in vitro (**Sub-toxic doses of lead seem to negatively affect the steroidogenic haemoproteins**)
A. Thoreux-Manlay, C. Le Goascogne, D. Segretain, B. Jégou, G. Pinon-Lataillade (Fontenay-aux Roses, Kremlin-Bicêtre, Bretagne, Paris, France) ..... 53–62

An international evaluation of the murine local lymph node assay and comparison of modified procedures (**This further interlaboratory validation of the local lymph node assay suggests that minor modifications of the procedure have no marked influence on results**)
I. Kimber, J. Hilton, R.J. Dearman, G.F. Gerberick, C.A. Ryan, D.A. Basketter, E.W. Scholes, G.S. Ladics, S.E. Loveless, R.V. House, A. Guy (Macclesfield, Sharnbrook, UK; Cincinnati, OH; Newark, DE; Chicago, IL) ..... 63–73

Erratum ..... 75

Experimental studies on the long-term effects of methylphenidate hydrochloride (**The treatment resulted in a reduction of mammary gland fibroadenomas in female and benign pheochromocytomas in male rats**)
J.K. Dunnick, J.R. Hailey (Research Triangle Park, NC) ..... 77–84

Susceptibility of primary cultures of proximal tubular and distal tubular cells from rat kidney to chemically induced toxicity (**The cultures reflect similar biochemical properties as do freshly isolated kidney cells**)
L.H. Lash, J.J. Tokarz, D.M. Pegouske (Detroit, MI) ..... 85–103

An attempt to explain interindividual variability in 24-h urinary excretion of inorganic arsenic metabolites by C57 BL/6J mice (**Different ways of elimination seem to cause great variations in one excretion route, namely urine**)
P. Telolahy, G. Morel, J.L. Cluet, H.M. Yang, N. Thieffry, J. de Ceaurriz (Chatenay-Malabry, Vandoeuvre, France) ..... 105–112

Cell injury and protection in long-term incubation of liver slices after in vivo initiation with paracetamol: cell injury after in vivo initiation with paracetamol (**In vivo/in vitro experimentation reveals seemingly principal differences between short term and long term injury and protection**)
D. Beales, A.E.M. McLean (london, UK) ..... 113–119

Effects of bolesatine on a cell line from the SP2/O thymic lymphosarcoma (**The toxic mycoprotein is a strong inhibitor of protein synthesis**)
L. Basset, R. Ennamany, J.P. Portail, O. Kretz, G. Deffieux, A. Badoc, B. Guillemain, E.E. Creppy (Bordeaux, France) ..... 121–125

**Immunotoxicology**

Structure-activity relationships of organic acid anhydrides as antigens in an animal model (**A considerable variation in the sensitizing potential of organic acid anhydrides in the guinea-pig was observed with the most marked effect seen when a hydrogen atom in the anhydride was substituted with a methyl group**)
H. Welinder, X. Zhang, C. Gustavsson, B. Björk, S. Skerfving (Lund, Sweden) ..... 127–136

**Toxicology Information and Resources**

Hazardous substances data bank (HSDB) as a source of environmental fate information on chemicals
G.C. Fonger (Bethesda, MD) ..... 137–145

Effects of chelating agents on testicular toxicity in mice caused by acute exposure to nickel (**Chelating agents may remove Ni from the testes and protect against lipid peroxidation and sterility**)
J. Xie, T. Funakoshi, H. Shimada, S. Kojima (Kumamoto, Japan) ..... 147–155

Selenium distribution and metabolic profile in relation to nutritional selenium status in rats (**A distribution study with intravenously injected $^{32}$Se-selenite**)
K.T. Suzuki, M. Itoh, M. Ohmichi (Chiba, Japan) ..... 157–165

Oxidative stress and cytotoxicity of 4-(2-thienyl)butyric acid in isolated rat renal proximal tubular and distal tubular cells (**Cells from the proximal tubular region were more susceptible, possible because of enhanced cellular accumulation of the toxin**)
L.H. Lash, J.J. Tokarz (Detroit, MI) ..... 167–175

**Immunotoxicology**

Structure activity relationships in skin sensitization using the murine local lymph node assay (**This study in DBA/2 mice indicates that TCDD is unlikely to interfere with intrathymic selection processes**)
J. Ashby, D.A. Basketter, D. Paton, I. Kimber (Macclesfield, Sharnbrook, UK) ..... 177–194

No evidence for emergence of autoreactive $V_\beta 6^+$ T cells in Mls-1$^a$ mice following exposure to a thymotoxic dose of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (**Results with a large panel of skin sensitizers tested with the murine local lymph node assay indicate this assay can be a useful tool to identify structure activity relationships**)
C. de Heer, G. van Driesten, H.-J. Schuurman, J. Rozing, H. van Loveren (Bilthoven, Leiden, The Netherlands; Basel, Switzerland) ..... 195–203

Author index ..... 205
Subject index ..... 207–210
Volume contents ..... 211–212
